*A manifesto for cyborgs: Science, technology, and socialist feminism in the 1980s*

Donna Haraway

An ironic dream of a common language for women in the integrated circuit

This chapter is an effort to build an ironic political myth faithful to feminism, socialism, and materialism. Perhaps more faithful as blasphemy is faithful, than as reverent worship and identification. Blasphemy has always seemed to require taking things very seriously. I know no better stance to adopt from within the secular-religious, evangelical traditions of U.S. politics, including the politics of socialist feminism. Blasphemy protects one from the Moral Majority within, while still insisting on the need for community. Blasphemy is not apostasy. Irony is about contradictions that do not resolve into larger wholes, even dialectically; about the tension of holding incompatible things together because both or all are necessary and true. Irony is about humor and serious play. It is also a rhetorical strategy and a political method, one I would like to see more

This article was first published in *Socialist Review*, No. 80, 1985. The essay originated as a response to a call for political thinking about the 1980s from socialist-feminist points of view, in hopes of deepening our political and cultural debates in order to renew commitments to fundamental social change in the face of the Reagan years. The cyborg manifesto tried to find a feminist place for connected thinking and acting in profoundly contradictory worlds. Since its publication, this bit of cyborgian writing has had a surprising half life. It has proved impossible to rewrite the cyborg. Cyborg's daughter will have to find its own matrix in another essay, starting from the proposition that the immune system is the biotechnical body's chief system of differences in late capitalism, where feminists might find provocative extraterrestrial maps of the networks of embodied power marked by race, sex, and class. This chapter is substantially the same as the 1985 version, with minor revisions and correction of notes. Donna Haraway, "A Manifesto for Cyborgs," *Socialist Review*, 80. Copyright 1985 by Duke University Press. Reprinted by permission.

honored within socialist feminism. At the center of my ironic faith, my blasphemy, is the image of the cyborg.

A cyborg is a cybernetic organism, a hybrid of machine and organism, a creature of social reality as well as a creature of fiction. Social reality is lived social relations, our most important political construction, a world-changing fiction. The international women's movements have constructed "women's experience," as well as uncovered or discovered this crucial collective object. This experience is a fiction and fact of the most crucial, political kind. Liberation rests on the construction of the consciousness, the imaginative apprehension, of oppression, and so of possibility. The cyborg is a matter of fiction and lived experience that changes what counts as women's experience in the late twentieth century. This is a struggle over life and death, but the boundary between science fiction and social reality is an optical illusion.

Contemporary science fiction is full of cyborgs – creatures simultaneously animal and machine, who populate worlds ambiguously natural and crafted. Modern medicine is also full of cyborgs, of couplings between organism and machine, each conceived as coded devices, in an intimacy and with a power that was not generated in the history of sexuality. Cyborg "sex" restores some of the lovely replicative baroque of ferns and invertebrates (such nice organic prophylactics against heterosexism). Cyborg replication is uncoupled from organic reproduction. Modern production seems like a dream of cyborg colonization of work, a dream that makes the nightmare of Taylorism seem idyllic. Modern war is a cyborg orgy, coded by C<sup>3</sup>I, command-control-communication-intelligence, an \$84 billion item in 1984's U.S. defense budget. I am making an argument for the cyborg as a fiction mapping our social and bodily reality and as an imaginative resource suggesting some very fruitful couplings. Foucault's biopolitics is a flaccid premonition of cyborg politics, a very open field.

By the late twentieth century, our time, a mythic time, we are all chimeras, theorized and fabricated hybrids of machine and organism; in short, we are cyborgs. The cyborg is our ontology; it gives us our politics. The cyborg is a condensed image of both imagination and material reality, the two joined centers structuring any possibility of historical transformation. In the traditions of Western science and politics – the tradition of racist, male-dominant capitalism; the tradition of progress; the tradition of the appropriation of nature as resource for the productions of culture; the tradition of reproduction of the self from the reflections of the other – the relation between organism and machine has been a border war. The stakes in the border war have been the territories of production, reproduction, and imagination. This chapter is an argument for pleasure in the confusion of boundaries and for responsibility in their construction.

It is also an effort to contribute to socialist-feminist culture and theory in a postmodernist, nonnaturalist mode and in the utopian tradition of imagining a world without gender, which is perhaps a world without genesis, but maybe also a world without end. The cyborg incarnation is outside salvation history. Nor does it mark time on an Oedipal calendar, attempting to heal the terrible cleavages of gender in oral symbiotic utopia or post-Oedipal apocalypse. As Zoe Sofoulis argues in her unpublished manuscript on Lacan, Klein, and nuclear culture, *Lacklein*, the most terrible and perhaps the most promising monsters in cyborg worlds are embodied in non-Oedipal narratives with a different logic of repression, which we need to understand for our survival.

The cyborg is a creature in a postgender world; it has no truck with bisexuality, pre-Oedipal symbiosis, unalienated labor, or other seductions to organic wholeness through a final appropriation of all the powers of the parts into a higher unity. In a sense, the cyborg has no origin story in the Western sense; a "final" irony since the cyborg is also the awful apocalyptic telos of the West's escalating dominations of abstract individuation, an ultimate self untied at last from all dependency, a man in space. An origin story in the Western humanist sense depends on the myth of original unity, fullness, bliss, and terror, represented by the phallic mother from whom all humans must separate, the task of individual development and of history, the twin potent myths inscribed most powerfully for us in psychoanalysis and Marxism. Hilary Klein has argued that both Marxism and psychoanalysis, in their concepts of labor and of individuation and gender formation, depend on the plot of original unity out of which difference must be produced and enlisted in a drama of escalating domination of woman/nature. The cyborg skips the step of original unity, of identification with nature in the Western sense. This is its illegitimate promise that might lead to subversion of its teleology as Star Wars.

The cyborg is resolutely committed to partiality, irony, intimacy, and perversity. It is oppositional, utopian, and completely without innocence. No longer structured by the polarity of public and private, the cyborg defines a technological polis based partly on a revolution of social relations in the oikos, the household. Nature and culture are reworked; the one can no longer be the resource for appropriation or incorporation by the other. The relationships for forming wholes from parts, including those of polarity and hierarchical domination, are at issue in the cyborg world. Unlike the hopes of Frankenstein's monster, the cyborg does not expect its father to save it through a restoration of the garden, that is, through the fabrication of a heterosexual mate, through its completion in a finished whole, a city and cosmos. The cyborg does not dream of community on the model of the organic family, this time without the Oedipal project. The cyborg would not recognize the Garden of Eden; it is not made of

mud and cannot dream of returning to dust. Perhaps that is why I want to see if cyborgs can subvert the apocalypse of returning to nuclear dust in the manic compulsion to name the Enemy. Cyborgs are not reverent; they do not remember the cosmos. They are wary of holism, but needy for connection – they seem to have a natural feel for united front politics, but without the vanguard party. The main trouble with cyborgs, of course, is that they are the illegitimate offspring of militarism and patriarchal capitalism, not to mention state socialism. But illegitimate offspring are often exceedingly unfaithful to their origins. Their fathers, after all, are inessential.

I will return to the science fiction of cyborgs at the end of the chapter, but now I want to signal three crucial boundary breakdowns that make the following political fictional (political scientific) analysis possible. By the late twentieth century in United States, scientific culture, the boundary between human and animal, is thoroughly breached. The last beachheads of uniqueness have been polluted, if not turned into amusement parks – language, tool use, social behavior, mental events. Nothing really convincingly settles the separation of human and animal. Many people no longer feel the need of such a separation; indeed, many branches of feminist culture affirm the pleasure of connection with human and other living creatures. Movements for animal rights are not irrational denials of human uniqueness; they are clear-sighted recognition of connection across the discredited breach of nature and culture. Biology and evolutionary theory over the last two centuries have simultaneously produced modern organisms as objects of knowledge and reduced the line between humans and animals to a faint trace re-etched in ideological struggle or professional disputes between life and social sciences. Within this framework, teaching modern Christian creationism should be fought as a form of child abuse.

Biological-determinist ideology is only one position opened up in scientific culture for arguing the meanings of human animality. There is much room for radical political people to contest for the meanings of the breached boundary.<sup>1</sup> The cyborg appears in myth precisely where the

1. Useful references to left and/or feminist radical science movements and theory and to biological/biotechnological issues include Ruth Bleier, *Science and Gender: A Critique of Biology and Its Themes on Women* (New York: Pergamon, 1984); Ruth Bleier, ed., *Feminist Approaches to Science* (New York: Pergamon, 1986); Sandra Harding, *The Science Question in Feminism* (Ithaca, NY: Cornell University Press, 1986); Anne Fausto-Sterling, *Myths of Gender* (New York: Basic Books, 1985); Stephen J. Gould, *Mismeasure of Man* (New York: Norton, 1981); Ruth Hubbard, Mary Sue Henifin, Barbara Fried, eds., *Biological Woman, the Convenient Myth* (Cambridge, MA: Schenkman, 1982); Evelyn Fox Keller, *Reflections on Gender and Science*

boundary between human and animal is transgressed. Far from signaling a walling off of people from other living things, cyborgs signal disturbingly and pleasurably tight coupling. Bestiality has a new status in this cycle of marriage exchange.

The second leaky distinction is between animal-human (organism) and machine. Pre-cybernetic machines could be haunted; there was always the specter of the ghost in the machine. This dualism structured the dialogue between materialism and idealism that was settled by a dialectical progeny called spirit or history, according to taste. But basically machines were not self-moving, self-designing, autonomous. They could not achieve man's dream, only mock it. They were not man, an author of himself, but only a caricature of that masculinist reproductive dream. To think they were otherwise was paranoid. Now we are not so sure. Late twentieth-century machines have made thoroughly ambiguous the difference between natural and artificial, mind and body, self-developing and externally designed, and many other distinctions that used to apply to organisms and machines. Our machines are disturbingly lively, and we ourselves frighteningly inert.

Technological determinism is only one ideological space opened up by the reconceptions of machine and organism as coded texts through which we engage in the play of writing and reading the world.<sup>2</sup> "Textualization"

of everything in poststructuralist, postmodernist theory has been damned by Marxists and socialist feminists for its utopian disregard for lived relations of domination that ground the "play" of arbitrary reading.<sup>3\*</sup> It is certainly true that postmodernist strategies, like my cyborg myth, subvert

Wars: The Politics of Artificial Intelligence," *Radical America*, Vol. 19, No. 6, 1985, pp. 39-52; *Global Electronics Newsletter*, 867 West Dana St., #204, Mountain View, CA 94041; *Processed World*, 55 Sutter St., San Francisco, CA 94104; *ISIS*, Women's International Information and Communication Service, P.O. Box 50 (Cornavin), 1211 Geneva 2, Switzerland, and Via Santa Maria dell'Anima 30, 00186 Rome, Italy. Fundamental approaches to modern social studies of science that do not continue the liberal mystification that it all started with Thomas Kuhn, include: Karin Knorr-Cetina, *The Manufacture of Knowledge* (Oxford: Pergamon, 1981); K. D. Knorr-Cetina and Michael Mulkay, eds., *Science Observed: Perspectives on the Social Study of Science* (Beverly Hills, CA: Sage, 1983); Bruno Latour and Steve Woolgar, *Laboratory Life: The Social Construction of Scientific Facts* (Beverly Hills, CA: Sage, 1979); Robert M. Young, "Interpreting the Production of Science," *New Scientist*, Vol. 29, March 1979, pp. 1026-1028. More is claimed than is known about room for contesting productions of science in the mythic/material space of "the laboratory"; the 1984 Directory of the Network for the Ethnographic Study of Science, Technology, and Organizations lists a wide range of people and projects crucial to better radical analysis; available from NESSTO, P.O. Box 11442, Stanford, CA 94305.

3. Fredric Jameson, "Post Modernism, or the Cultural Logic of Late Capitalism," *New Left Review*, July/August 1984, pp. 53-94. See Marjorie Perloff, "Dirty" Language and Scramble Systems," *Sulfur* Vol 2, 1984, pp. 178-183; Kathleen Fraser, *Something (Even Human Voices) in the Foreground, a Lake* (Berkeley, CA: Kelsey St. Press, 1984). For feminist modernist/postmodernist cyborg writing, see *How(ever)*, 871 Corbett Ave., San Francisco, CA 94131.

\* A provocative, comprehensive argument about the politics and theories of postmodernism is made by Fredric Jameson, who argues that postmodernism is not an option, a style among others, but a cultural dominant requiring radical reinvention of left politics from within; there is no longer any place from without that gives meaning to the comforting fiction of critical distance. Jameson also makes clear why one cannot be for or against postmodernism, an essentially moralist move. My position is that feminists (and others) need continuous cultural reinvention, postmodernist critique, and historical materialism; only a cyborg would have a chance. The old dominations of white capitalist patriarchy seem nostalgically innocent now: They normalized heterogeneity, e.g., into man and woman, white and black. "Advanced capitalism" and postmodernism release heterogeneity without a norm, and we are flattened, without subjectivity, which requires depth, even unfriendly and drowning depths. It is time to write *The Death of the Clinic*. The clinic's methods required bodies and works; we have texts and surfaces. Our dominations don't work by medicalization and normalization anymore; they work by networking, communications redesign, stress management.

myriad organic wholes (e.g., the poem, the primitive culture, the biological organism). In short, the certainty of what counts as nature – a source of insight and a promise of innocence – is undermined, probably fatally. The transcendent authorization of interpretation is lost and with it the ontology grounding Western epistemology. But the alternative is not cynicism or faithlessness, that is, some version of abstract existence, like the accounts of technological determinism destroying “man” by the “machine” or “meaningful political action” by the “text.” Who cyborgs will be is a radical question; the answers are a matter of survival. Both chimpanzees and artifacts have politics, so why shouldn’t we?<sup>4</sup>

The third distinction is a subset of the second: The boundary between physical and nonphysical is very imprecise for us. Pop physics books on the consequences of quantum theory and the indeterminacy principle are a kind of popular scientific equivalent to the Harlequin romances as a marker of radical change in American white heterosexuality: They get it wrong, but they are on the right subject. Modern machines are quintessentially *microelectronic devices: They are everywhere and they are invisible*. Modern machinery is an irreverent upstart god, mocking the Father’s ubiquity and spirituality. The silicon chip is a surface for writing; it is etched in molecular scales disturbed only by atomic noise, the ultimate interference for nuclear scores. Writing, power, and technology are old partners in Western stories of the origin of civilization, but miniaturization has changed our experience of mechanism. Miniaturization has turned out to be about power; small is not so much beautiful as preeminently dangerous, as in Cruise missiles. Contrast the TV sets of the 1950s or the news cameras of the 1970s with the TV wristbands or hand-sized video cameras now advertised. Our best machines are made of sunshine; they are all light and clean because they are nothing but signals, electromagnetic waves, a section of a spectrum. These machines are eminently

Normalization gives way to automation, utter redundancy. Michel Foucault’s *Birth of the Clinic, History and Sexuality*, and *Discipline and Punish* name of form of power at its moment of implosion. The discourse of biopolitics gives way to technobabble, the language of the spliced substantive; no noun is left whole by the multinationals. These are their names, listed from one issue of *Science*: Tech-Knowledge, Genentech, Allergen, Hybritech, Compupro, Genen-cor, Syntex, Allelix, Agrigenetics Corp., Syntro, Codon, Repligen; Micro-Angelo from Scion Corp., Percom Data, Inter Systems, Cyborg Corp., Statcom Corp., Intertec. If we are imprisoned by language, then escape from that prison-house requires language poets, a kind of cultural restriction enzyme to cut the code; cyborg heteroglossia is one form of radical culture politics.

4. Frans de Waal, *Chimpanzee Politics: Power and Sex among the Apes* (New York: Harper & Row, 1982); Langdon Winner, “Do artifacts have politics?” *Daedalus* (Winter 1980): 121–136.

portable, mobile – a matter of immense human pain in Detroit and Singapore. People are nowhere near so fluid, being both material and opaque. Cyborgs are ether, quintessence.

The ubiquity and invisibility of cyborgs is precisely why these Sunshine Belt machines are so deadly. They are as hard to see politically as materially. They are about consciousness – or its simulation.<sup>5</sup> They are floating signifiers moving in pickup trucks across Europe, blocked more effectively by the witch-weavings of the displaced and so unnatural Greenham women, who read the cyborg webs of power very well, than by the militant labor of older masculinist politics, whose natural constituency needs defense jobs. Ultimately, the “hardest” science is about the realm of greatest boundary confusion, the realm of pure number, pure spirit, C<sup>1</sup>, cryptography, and the preservation of potent secrets. The new machines are so clean and light. Their engineers are sun worshipers mediating a new scientific revolution associated with the night dream of post industrial society. The diseases evoked by these clean machines are “no more” than the minuscule coding changes of an antigen in the immune system, “no more” than the experience of stress. The “nimble” fingers of “Oriental” women, the old fascination of little Anglo-Saxon Victorian girls with dollhouses, and women’s enforced attention to the small take on quite new dimensions in this world. There might be a cyborg Alice taking account of these new dimensions. Ironically, it might be the unnatural cyborg women making chips in Asia and spiral dancing in Santa Rita jail after an antinuclear action whose constructed unities will guide effective oppositional strategies.

So my cyborg myth is about transgressed boundaries, potent fusions, and dangerous possibilities which progressive people might explore as one part of needed political work. One of my premises is that most American socialists and feminists see deepened dualisms of mind and body, animal and machine, idealism and materialism in the social practices, symbolic formulations, and physical artifacts associated with high technology and scientific culture. From *One-Dimensional Man* to *The Death of Nature*,<sup>6</sup> the analytic resources developed by progressives have insisted on the necessary domination of technics and recalled us to an imagined organic body to integrate our resistance. Another of my premises is that

5. Jean Baudrillard, *Simulations*, trans. P. Foss, P. Patton, P. Beitchman (New York: Semiotext(e), 1983). Jameson (“Postmodernism,” p. 66) points out that Plato’s definition of the simulacrum is the copy for which there is no original, i.e., the world of advanced capitalism, of pure exchange. See *Discourse* 9, Spring/Summer 1987, for a special issue on technology (Cybernetics, Ecology, and the Postmodern Imagination).

6. Herbert Marcuse, *One-Dimensional Man* (Boston: Beacon Press, 1964); Carolyn Merchant, *Death of Nature* (San Francisco: Harper & Row, 1980).

the need for unity of people trying to resist worldwide intensification of domination has never been more acute. But a slightly perverse shift of perspective might better enable us to contest for meanings, as well as for other forms of power and pleasure in technologically mediated societies.

From one perspective, a cyborg world is about the final imposition of a grid of control on the planet, about the final abstraction embodied in a Star Wars apocalypse waged in the name of defense, about the final appropriation of women's bodies in a masculinist orgy of war.<sup>7</sup> From another perspective, a cyborg world might be about lived social and bodily realities in which people are not afraid of their joint kinship with animals and machines, not afraid of permanently partial identities and contradictory standpoints. The political struggle is to see from both perspectives at once because each reveals both dominations and possibilities unimaginable from the other vantage point. Single vision produces worse illusions than double vision or many-headed monsters. Cyborg unities are monstrous and illegitimate; in our present political circumstances, we could hardly hope for more potent myths for resistance and recoupling. I like to imagine the Livermore Action Group, LAG, as a kind of cyborg society, dedicated to realistically converting the laboratories that most fiercely embody and spew out the tools of technological apocalypse, and committed to building a political form that actually manages to hold together witches, engineers, elders, perverts, Christians, mothers, and Leninists long enough to disarm the state. *Fission Impossible is the name of the affinity group in my town. (Affinity: related not by blood but by choice, the appeal of one chemical nuclear group for another, avidity.)*<sup>8</sup>

7. Zoe Sofia, "Exterminating Fetuses," *Diacritics*, Vol. 14, No. 2, Summer 1984, pp. 47-59, and "Jupiter Space" (Pomona, CA: American Studies Association, 1984).

8. For ethnographic accounts and political evaluations, see Barbara Epstein, "The Politics of Prefigurative Community: The Non-Violent Direction Action Movement," *The Year Left*, forthcoming, and Noel Sturgeon, qualifying essay on feminism, anarchism, and nonviolent direct-action politics, University of California, Santa Cruz, 1986. Without explicit irony, adopting the spaceship earth/whole earth logo of the planet photographed from space, set off by the slogan "Love Your Mother," the May 1987 Mothers and Others Day action at the nuclear weapons testing facility in Nevada nonetheless took account of the tragic contradictions of views of the earth. Demonstrators applied for official permits to be on the land from officers of the Western Shoshone tribe, whose territory was invaded by the U.S. government when it built the nuclear weapons test ground in the 1950s. Arrested for trespassing, the demonstrators argued that the police and weapons facility personnel, without authorization from the proper officials, were the trespassers. One affinity group at the women's action called themselves the Surrogate Others, and in solidarity with the creatures forced to tunnel in the same ground with

## Fractured identities

It has become difficult to name one's feminism by a single adjective – or even to insist in every circumstance upon the noun. Consciousness of exclusion through naming is acute. Identities seem contradictory, partial, and strategic. With the hard-won recognition of their social and historical constitution, gender, race, and class cannot provide the basis for belief in "essential" unity. There is nothing about being "female" that naturally binds women. There is not even such a state as "being" female, itself a highly complex category constructed in contested sexual scientific discourses and other social practices. Gender, race, or class consciousness is an achievement forced on us by the terrible historical experience of the contradictory social realities of patriarchy, colonialism, racism and capitalism. Who counts as "us" in my own rhetoric? Which identities are available to ground such a potent political myth called "us," and what could motivate enlistment in this collectivity? Painful fragmentation among feminists (not to mention among women) along every possible fault line has made the concept of woman elusive, an excuse for the matrix of women's dominations of each other. For me – and for many who share a similar historical location in white, professional, middle-class, female, radical, North American, mid-adult bodies – the sources of a crisis in political identity are legion. The recent history for much of the U.S. Left and the U.S. feminism has been a response to this kind of crisis by endless splitting and searches for a new essential unity. But there has also been a growing recognition of another response through coalition – affinity, not identity.<sup>9</sup>

Chela Sandoval, from a consideration of specific historical moments in the formation of the new political voice called women of color, has theorized a hopeful model of political identity called "oppositional consciousness," born of the skills for reading webs of power by those refused

the bomb, they enacted a cyborgian emergence from the constructed body of a large, nonheterosexual desert worm.

9. Powerful developments of coalition politics emerge from "third world" speakers, speaking from nowhere, the displaced center of the universe, earth: "We live on the third planet from the sun" – *Sun Poem* by Jamaican writer Edward Kamau Braithwaite, review by Nathaniel Mackey, *Sulfur*, Vol. 2, 1984, pp. 200-205. *Home Girls*, ed. Barbara Smith (New York: Kitchen Table Women of Color Press, 1983), ironically subverts naturalized identities precisely while constructing a place from which to speak called home. See Bernice Reagan, "Coalition Politics, Turning the Century," pp. 356-368. Trinh T. Minh-ha, ed., "She, the Inappropriate/d Other," *Discourse*, Vol. 8, Fall/Winter 1986-1987.

stable membership in the social categories of race, sex, or class.<sup>10</sup> "Women of color," a name contested at its origins by those whom it would incorporate, as well as a historical consciousness marking systematic breakdown of all the signs of Man in Western traditions, constructs a kind of postmodernist identity out of otherness, difference, and specificity. This postmodernist identity is fully political, whatever might be said about other possible postmodernisms. Sandoval's oppositional consciousness is about contradictory locations and heterochronic calendars, not about relativisms and pluralisms.

Sandoval emphasizes the lack of any essential criterion for identifying who is a woman of color. She notes that the definition of the group has been by conscious appropriation of negation. For example, a chicana or a U.S. black woman has not been able to speak as a woman or as a black person or as a chicano. Thus, she was at the bottom of a cascade of negative identities, left out of even the "privileged" oppressed authorial categories called "women and blacks," who claimed to make the important revolutions. The category "woman" negated all nonwhite women; "black" negated all non-black people, as well as all black women. But there was also no "she," no singularity, but a sea of differences among U.S. women who have affirmed their historical identity as U.S. women of color. This identity marks out a self-consciously constructed space that cannot affirm the capacity to act on the basis of natural identification, but only on the basis of conscious coalition, of affinity, of political kinship.<sup>11</sup> Unlike the "woman" of some streams of the white women's movement in the United States, there is no naturalization of the matrix, or at least this is what Sandoval argues is uniquely available through the power of oppositional consciousness.

Sandoval's argument has to be seen as one potent formulation for feminists out of the worldwide development of anti-colonialist discourse, that is, discourse dissolving the West and its highest product –

11. Bell Hooks, *Ain't I a Woman?* (Boston: South End Press, 1981); Bell Hooks, *Feminist Theory: From Margin to Center* (Boston: South End Press, 1984); Gloria Hull, Patricia Bell Scott, and Barbara Smith, eds., *All the Women Are White, All the Men Are Black, But Some of Us Are Brave: Black Women's Studies* (Old Westbury, NY: Feminist Press, 1982). Toni Cade Bambara, *The Salt Eaters* (New York: Vintage/Random House, 1981), writes an extraordinary postmodernist novel, in which the women of color theater group, The Seven Sisters, explores a form of unity. Elliott Butler-Evans, *Race, Gender, and Desire: Narrative Strategies and the Production of Ideology in the Fiction of Toni Cade Bambara, Toni Morrison and Alice Walker*, Ph.D. Dissertation, University of California, Santa Cruz, 1987.

the one who is not animal, barbarian, or woman: that is, man, the author of a cosmos called history. As Orientalism is deconstructed politically and semiotically, the identities of the Occident destabilize, including those of its feminists.<sup>12</sup> Sandoval argues that "women of color" have a chance to build an effective unity that does not replicate the imperializing, totalizing revolutionary subjects of previous Marxisms and feminisms which had not faced the consequences of the disorderly polyphony emerging from decolonization.

Katie King has emphasized the limits of identification and the political/poetic mechanics of identification built into reading "the poem," that generative core of cultural feminism. King criticizes the persistent tendency among contemporary feminists from different "moments" or "conversations" in feminist practice to taxonomize the women's movement to make one's own political tendencies appear to be the telos of the whole. These taxonomies tend to remake feminist history to appear to be an ideological struggle among coherent types persisting over time, especially those typical units called radical, liberal, and socialist feminism. Literally, all other feminisms are either incorporated or marginalized, usually by building an explicit ontology and epistemology.<sup>13</sup> Taxonomies of feminism produce epistemologies to police deviation from official women's experience. Of course, "women's culture," like women of color, is consciously created by mechanisms inducing affinity. The rituals of poetry, music, and certain forms of academic practice have been preeminent. The politics of race and culture in the U.S. women's movements are intimately interwoven. The common achievement of King and Sandoval is learning how to craft a poetic/political unity without relying on a logic of appropriation, incorporation, and taxonomic identification.

13. Katie King has developed a theoretically sensitive treatment of the workings of feminist taxonomies as genealogies of power in feminist ideology and polemic: Katie King, "Canons without Innocence," Ph.D. thesis, University of California, Santa Cruz, 1987, and "The Situation of Lesbianism as Feminism's Magical Sign: Contests for Meaning in the U.S. Women's Movement, 1968–72," *Communication*, Vol. 9, No. 1, 1985, pp. 65–91. King examines an intelligent, problematic example of taxonomizing feminisms to make a little machine producing the desired final position; Alison Jaggar, *Feminist Politics and Human Nature* (Totowa, NJ: Rowman & Allanheld, 1983). My caricature here of socialist and radical feminism is also an example.

The theoretical and practical struggle against unity-through-domination or unity-through-incorporation ironically not only undermines the justifications for patriarchy, colonialism, humanism, positivism, essentialism, scientism, and other unlamented -isms, but all claims for an organic or natural standpoint. I think that radical and socialist/Marxist feminisms have also undermined their/our own epistemological strategies and that this is a crucially valuable step in imagining possible unities. It remains to be seen whether all epistemologies as Western political people have known them fail us in the task to build effective affinities.

It is important to note that the effort to construct revolutionary standpoints, epistemologies as achievements of people committed to changing the world, has been part of the process showing the limits of identification. The acid tools of postmodernist theory and the constructive tools of ontological discourse about revolutionary subjects might be seen as ironic allies in dissolving Western selves in the interests of survival. We are excruciatingly conscious of what it means to have a historically constituted body. But with the loss of innocence in our origin, there is no expulsion from the Garden either. Our politics lose the indulgence of guilt with the naïveté of innocence. But what would another political myth for socialist feminism look like? What kind of politics could embrace partial, contradictory, permanently unclosed constructions of personal and collective selves and still be faithful, effective – and, ironically, socialist feminist?

I do not know of any other time in history when there was greater need for political unity to confront effectively the dominations of race, gender, sexuality, and class. I also do not know of any other time when the kind of unity we might help build could have been possible. None of “us” have any longer the symbolic or material capability of dictating the shape of reality to any of “them.” Or at least “we” cannot claim innocence from practicing such dominations. White women, including Euroamerican socialist feminists, discovered (i.e., were forced kicking and screaming to notice) the noninnocence of the category “woman.” That consciousness changes the configuration of all previous categories; it denatures them as heat denatures a fragile protein. Cyborg feminists have to argue that “we” do not want any more natural matrix of unity and that no construction is whole. Innocence, and the corollary insistence on victimhood as the only ground for insight, has done enough damage. But the constructed revolutionary subject must give late twentieth-century people pause as well. In the fraying of identities and in the reflexive strategies for constructing them, the possibility opens up for weaving something other than a shroud for the day after the apocalypse that so prophetically ends salvation history.

But Marxist/socialist feminisms and radical feminisms have simultaneously naturalized and denatured the category “woman” and consciousness of the social lives of “women.” Perhaps a schematic caricature can highlight both kinds of moves. Marxian socialism is rooted in an analy-

sis of wage labor which reveals class structure. The consequence of the wage relationship is systematic alienation, as the worker is dissociated from his [sic] product. Abstraction and illusion rule in knowledge; domination rules in practice. Labor is the preeminently privileged category enabling the Marxist to overcome illusion and find that point of view which is necessary for changing the world. Labor is the humanizing activity that makes man; labor is an ontological category permitting the knowledge of a subject, and so the knowledge of subjugation and alienation.

In faithful filiation, socialist feminism advanced by allying itself with the basic analytic strategies of this Marxism. The main achievement of both Marxist feminists and socialist feminists was to expand the category of labor to accommodate what (some) women did, even when the wage relation was subordinated to a more comprehensive view of labor under capitalist patriarchy. In particular, women’s labor in the household and women’s activity as mothers generally, that is, reproduction in the socialist feminist sense, entered theory on the authority of analogy to the Marxian concept of labor. The unity of women here rests on an epistemology based on the ontological structure of “labor.” Marxist/socialist feminism does not “naturalize” unity; it is a possible achievement based on a possible standpoint rooted in social relations. The essentializing move is in the ontological structure of labor or of its analogue, women’s activity.<sup>14\*</sup> The inheritance of Marxian humanism, with its preeminently

14. The feminist standpoint argument has been developed by Jane Flax, “Political Philosophy and the Patriarchal Unconsciousness,” *Discovering Reality*, ed. Sandra Harding and Merrill Hintikka (Dordrecht: Reidel, 1983); Sandra Harding, “The Contradictions and Ambivalence of a Feminist Science,” ms.; Harding and Hintikka, *Discovering Reality*; Nancy Hartsock, *Money, Sex and Power* (New York: Longman, 1983) and “The Feminist Standpoint: Developing the Ground for a Specifically Feminist Historical Materialism,” *Discovering Reality*, ed. (note 1); Nancy Hartsock, “Rethinking Modernism: Minority vs. Majority Theories,” *Cultural Critique* 7 (1987): 187–206; Hilary Rose, “Women’s Work: Women’s Knowledge,” *What is Feminism? A Re-examination*, ed. Juliet Mitchell and Ann Oakley (New York: Pantheon, 1986), pp. 161–183.

\* The central role of object-relations versions of psychoanalysis and related

Western self, is the difficulty for me. The contribution from these formulations has been the emphasis on the daily responsibility of real women to *build* unities, rather than to naturalize them.

Catherine MacKinnon's version of radical feminism is itself a caricature of the appropriating, incorporating, totalizing tendencies of Western theories of identity grounding action.<sup>15</sup> It is factually and politically wrong to assimilate all of the diverse "moments" or "conversations" in recent women's politics named radical feminism to MacKinnon's version. But the teleological logic of her theory shows how an epistemology and ontology – including their negations – erase or police difference. Only one of the effects of MacKinnon's theory is the rewriting of the history of the polymorphous field called radical feminism. The major effect is the production of a theory of experience, of women's identity, that is a kind of apocalypse for all revolutionary standpoints. That is, the totalization built into this tale of radical feminism achieves its end – the unity of women – by enforcing the experience of and testimony to radical nonbeing. As for the Marxist/socialist feminist, consciousness is an achievement, not a nat-

strong universalizing moves in discussing reproduction, caring work, and mothering in many approaches to epistemology underline their authors' resistance to what I am calling postmodernism. For me, both the universalizing moves and these versions of psychoanalysis make analysis of "women's place in the integrated circuit" difficult and lead to systematic difficulties in accounting for or even seeing major aspects of the construction of gender and gendered social life.

15. Catherine MacKinnon, "Feminism, Marxism, Method, and the State: An Agenda for Theory," *Signs*, Vol 7, No. 3, Spring 1982, pp. 515–544. See also MacKinnon, *Feminism Unmodified* (Cambridge, MA: Harvard University Press, 1987). I make a category error in "modifying" MacKinnon's positions with the qualifier "radical," thereby generating my own reductive critique of extremely heterogeneous writing, which does explicitly use that label, by my taxonomically interested argument about writing which does not use the modifier and which brooks no limits and thereby adds to the various dreams of a common, in the sense of univocal, language for feminism. My category error was occasioned by an assignment to write from a particular taxonomic position which itself has a heterogeneous history, socialist feminism, for *Socialist Review*. A critique indebted to MacKinnon, but without the reductionism and with an elegant feminist account of Foucault's paradoxical conservatism on sexual violence (rape), is Teresa de Lauretis, "The Violence of Rhetoric: Considerations on Representation and Gender," *Semiotica*, Vol. 54, 1985, pp. 11–31, and Teresa de Lauretis, ed., *Feminist Studies/Critical Studies* (Bloomington: Indiana University Press, 1986). A theoretically elegant feminist social-historical examination of family violence, that insists on women's, men's, and children's complex agency without losing sight of the material structures of male domination, race, and class, is Linda Gordon, *Heroes of their own Lives* (New York: Viking, 1988).

ural fact. MacKinnon's theory eliminates some of the difficulties built into humanist revolutionary subjects, but at the cost of radical reductionism.

MacKinnon argues that feminism necessarily adopted a different analytical strategy from Marxism, looking first not at the structure of class, but at the structure of sex/gender and its generative relationship, men's constitution and appropriation of women sexually. Ironically, MacKinnon's "ontology" constructs a nonsubject, a nonbeing. Another's desire, not the self's labor, is the origin of "woman." She therefore develops a theory of consciousness that enforces what can count as "women's" experience – anything that names sexual violation, indeed, sex itself as far as "women" can be concerned. Feminist practice is the construction of this form of consciousness; that is, the self-knowledge of a self-who-is-not.

Perversely, sexual appropriation in this feminism still has the epistemological status of labor, that is, the point from which analysis able to contribute to changing the world must flow. But sexual objectification, not alienation, is the consequence of the structure of sex/gender. In the realm of knowledge, the result of sexual objectification is illusion and abstraction. However, a woman is not simply alienated from her product, but in a deep sense she does not exist as a subject, or even potential subject, since she owes her existence as a woman to sexual appropriation. To be constituted by another's desire is not the same thing as to be alienated in the violent separation of the laborer from his product.

MacKinnon's radical theory of experience is totalizing in the extreme; it does not so much marginalize as obliterate the authority of any other women's political speech and action. It is a totalization producing what Western patriarchy itself never succeeded in doing – feminists' consciousness of the nonexistence of women, except as products of men's desire. I think MacKinnon correctly argues that no Marxian version of identity can firmly ground women's unity. But in solving the problem of the contradictions of any Western revolutionary subject for feminist purposes, she develops an even more authoritarian doctrine of experience. If my complaint about socialist/Marxian standpoints is their unintended erasure of polyvocal, unassimilable, radical difference made visible in anti-colonial discourse and practice, MacKinnon's intentional erasure of all difference through the device of the "essential" nonexistence of women is not reassuring.

In my taxonomy, which like any other taxonomy is a reinscription of history, radical feminism can accommodate all the activities of women named by socialist feminists as forms of labor only if the activity can somehow be sexualized. Reproduction had different tones of meanings for the two tendencies, one rooted in labor, one in sex, both calling the consequences of domination and ignorance of social and personal reality "false consciousness."

Beyond either the difficulties or the contributions in the argument of any one author, neither Marxist nor radical-feminist points of view have tended to embrace the status of a partial explanation; both were regularly constituted as totalities. Western explanation has demanded as much; how else could the Western author incorporate its others? Each tried to annex other forms of domination by expanding its basic categories through analogy, simple listing, or addition. Embarrassed silence about race among white radical and socialist feminists was one major, devastating political consequence. History and polyvocality disappear into political taxonomies that try to establish genealogies. There was no structural room for race (or for much else) in theory claiming to reveal the construction of the category "woman" and social group "women" as a unified or totalizable whole. The structure of my caricature looks like this:

- Socialist Feminism –  
 structure of class//wage labor//alienation  
 labor, by analogy reproduction, by extension sex, by addition race
- Radical Feminism –  
 structure of gender//sexual appropriation//objectification  
 sex, by analogy labor, by extension reproduction, by addition race

In another context, the French theorist Julia Kristeva claimed women appeared as a historical group after World War II, along with groups like youth. Her dates are doubtful, but we are now accustomed to remembering that as objects of knowledge and as historical actors, "race" did not always exist, "class" has a historical genesis, and "homosexuals" are quite junior. It is no accident that the symbolic system of the family of man – and so the essence of woman – breaks up at the same moment that networks of connection among people on the planet are unprecedentedly multiple, pregnant, and complex. "Advanced capitalism" is inadequate to convey the structure of this historical moment. In the Western sense, the end of man is at stake. It is no accident that woman disintegrates into women in our time. Perhaps socialist feminists were not substantially guilty of producing essentialist theory that suppressed women's particularity and contradictory interests. I think we have been, at least through unreflective participation in the logics, languages, and practices of white humanism and through searching for a single ground of domination to secure our revolutionary voice. Now we have less excuse. But in the consciousness of our failures, we risk lapsing into boundless difference and giving up on the confusing task of making partial, real connection. Some differences are playful; some are poles of world historical systems of domination. Epistemology is about knowing the difference.

## The informatics of domination

In this attempt at an epistemological and political position, I would like to sketch a picture of possible unity, a picture indebted to socialist and feminist principles of design. The frame for my sketch is set by the extent and importance of rearrangements in worldwide social relations tied to science and technology. I argue for a politics rooted in claims about fundamental changes in the nature of class, race, and gender in an emerging system of world order analogous in its novelty and scope to that created by industrial capitalism; we are living through a movement from an organic, industrial society to a polymorphous, information system – from all work to all play, a deadly game. Simultaneously material and ideological, the dichotomies may be expressed in the following chart of transitions from the comfortable old hierarchical dominations to the scary new networks I have called the informatics of domination:

Representation	Simulation
Bourgeois novel, realism	Science fiction, postmodernism
Organism	Biotic component
Depth, integrity	Surface, boundary
Heat	Noise
Biology as clinical practice	Biology as inscription
Physiology	Communications engineering
Small group	Subsystem
Perfection	Optimization
Eugenics	Population Control
Decadence, <i>Magic Mountain</i>	Obsolescence, <i>Future Shock</i>
Hygiene	Stress management
Microbiology, tuberculosis	Immunology, AIDS
Organic division of labor	Ergonomics/cybernetics of labor
Functional specialization	Modular construction
Reproduction	Replication
Organic sex role specialization	Optimal genetic strategies
Biological determinism	Evolutionary inertia, constraints
Community ecology	Ecosystem
Racial chain of being	Neo-imperialism, United Nations humanism
Scientific management in home/factory	Global factory/electronic cottage
Family/market/factory	Women in the integrated circuit
Family wage	Comparable worth

Public/private	Cyborg citizenship
Nature/culture	Fields of difference
Cooperation	Communications enhancement
Freud	Lacan
Sex	Genetic engineering
Labor	Robotics
Mind	Artificial intelligence
World War II	Star Wars
White capitalist patriarchy	Informatics of domination

This list suggests several interesting things.<sup>16</sup> First, the objects on the right-hand side cannot be coded as “natural,” a realization that subverts naturalistic coding for the left-hand side as well. We cannot go back ideologically or materially. It’s not just that “god” is dead; so is the “goddess.” Or both are revived in the worlds charged with microelectronic and biotechnological politics. In relation to objects like biotic components, one must think not in terms of essential properties, but in terms of design, boundary constraints, rates of flows, systems logics, costs of lowering constraints. Sexual reproduction is one kind of reproductive strategy among many, with costs and benefits function of the system environment. Ideologies of sexual reproduction can no longer reasonably call on notions of sex and sex role as organic aspects in natural objects like organisms and families. Such reasoning will be unmasked as irrational, and ironically corporate executives reading *Playboy* and anti-radical feminists will make strange bedfellows in jointly unmasking the irrationalism.

Likewise for race, racist and anti-racist ideologies about human diversity have to be formulated in terms of frequencies of parameters. It is “irrational” to invoke concepts like primitive and civilized. For liberals and radicals, the search for integrated social systems gives way to a new practice called “experimental ethnography” in which an organic object dissipates in attention to the play of writing. At the level of ideology, we see translations of racism and colonialism into languages of development

16. My previous efforts to understand biology as a cybernetic command-control discourse and organisms as “natural-technical objects of knowledge” are “The High Cost of Information in Post-World War II Evolutionary Biology,” *Philosophical Forum*, Vol. 13, Nos. 2–3, 1979, pp. 206–237; “Signs of Dominance: From a Physiology to a Cybernetics of Primate Society,” *Studies in History of Biology*, Vol. 6, 1983, pp. 129–219; “Class, Race, Sex, Scientific Objects of Knowledge: A Socialist-Feminist Perspective on the Social Construction of Productive Knowledge and Some Political Consequences,” *Women in Scientific and Engineering Professions*, ed. Violet Haas and Carolyn Perucci (Ann Arbor, MI: University of Michigan Press, 1984), pp. 212–229.

and underdevelopment, rates and constraints of modernization. Any objects or persons can be “reasonably” thought of in terms of disassembly and reassembly; no “natural” architectures constrain system design. The financial districts in all the world’s cities, as well as the export-processing and free-trade zones, proclaim this elementary fact of “late capitalism.” The entire universe of objects that can be known scientifically must be formulated as problems in communications engineering (for the managers) or theories of the text (for those who would resist). Both are cyborg semiologies.

One should expect control strategies to concentrate on boundary conditions and interfaces, on rates of flow across boundaries – and not on the integrity of natural objects. “Integrity” or “sincerity” of the Western self gives way to decision procedures and expert systems. For example, control strategies applied to women’s capacities to give birth to new human beings will be developed in the languages of population control and maximization of goal achievement for individual decisionmakers. Control strategies will be formulated in terms of rates, costs of constraints, degrees of freedom. Human beings, like any other component or subsystem, must be localized in a system architecture whose basic modes of operation are probabilistic, statistical. No objects, spaces, or bodies are sacred in themselves; any component can be interfaced with any other if the proper standard, the proper code, can be constructed for processing signals in a common language. Exchange in this world transcends the universal translation effected by capitalist markets that Marx analyzed so well. The privileged pathology affecting all kinds of components in this universe is stress – communications breakdown.<sup>17</sup> The cyborg is not subject to Foucault’s biopolitics; the cyborg simulates politics, a much more potent field of operations. Discursive constructions are no joke.

This kind of analysis of scientific and cultural objects of knowledge which have appeared historically since World War II prepares us to notice some important inadequacies in feminist analysis which has proceeded as if the organic, hierarchical dualism ordering discourse in the West since Aristotle still ruled. They have been cannibalized, or as Zoe Sofia (Sofoulis) might have put it, they have been “techno-digested.” The dichotomies between mind and body, animal and human, organism and machine, public and private, nature and culture, men and women, primitive and civilized are all in question ideologically. The actual situation of women is their integration/exploitation into a world system of production/reproduction and communication called the informatics of domination. The home, work place, market, public arena, the body itself – all can

17. E. Rusten Hogness, “Why Stress? A Look at the Making of Stress, 1936–1956,” available from the author, 4437 Mill Creek Rd., Healdsburg, CA 95448.

be dispersed and interfaced in nearly infinite, polymorphous ways, with large consequences for women and others – consequences that themselves are very different for different people and which make potent oppositional international movements difficult to imagine and essential for survival. One important route for reconstructing socialist-feminist politics is through theory and practice addressed to the social relations of science and technology, including crucially the systems of myth and meanings structuring our imaginations. The cyborg is a kind of disassembled and reassembled, postmodern collective and personal self. This is the self feminists must code.

Communications technologies and biotechnologies are the crucial tools recrafting our bodies. These tools embody and enforce new social relations for women worldwide. Technologies and scientific discourses can be partially understood as formalizations, that is, as frozen moments, of the fluid social interactions constituting them, but they should also be viewed as instruments for enforcing meanings. The boundary is permeable between tool and myth, instrument and concept, historical systems of social relations and historical anatomies of possible bodies, including objects of knowledge. Indeed, myth and tool mutually constitute each other.

Furthermore, communications sciences and modern biologies are constructed by a common move – the translation of the world into a problem of coding, a search for a common language in which all resistance to instrumental control disappears and all heterogeneity can be submitted to disassembly, reassembly, investment, and exchange.

In communications sciences, the translation of the world into a problem in coding can be illustrated by looking at cybernetic (feedback controlled) systems theories applied to telephone technology, computer design, weapons deployment, or data-base construction and maintenance. In each case, solution to the key questions rests on a theory of language and control; the key operation is determining the rates, directions, and probabilities of flow of a quantity called information. The world is subdivided by boundaries differentially permeable to information. Information is just that kind of quantifiable element (unit, basis of unity) which allows universal translation and so unhindered instrumental power (called effective communication). The biggest threat to such power is interruption of communication. Any system breakdown is a function of stress. The fundamentals of this technology can be condensed into the metaphor C<sup>2</sup>I, command-control-communication-intelligence, the military's symbol for its operations theory.

In modern biologies, the translation of the world into a problem in coding can be illustrated by molecular genetics, ecology, sociobiological evolutionary theory, and immunobiology. The organism has been translated into problems of genetic coding and read-out. Biotechnology, a writing

technology, informs research broadly.<sup>18</sup> In a sense, organisms have ceased to exist as objects of knowledge, giving way to biotic components, that is, special kinds of information-processing devices. The analogous moves in ecology could be examined by probing the history and utility of the concept of the ecosystem. Immunobiology and associated medical practices are rich exemplars of the privilege of coding and recognition systems as objects of knowledge, as constructions of bodily reality for us. Biology here is a kind of cryptography. Research is necessarily a kind of intelligence activity. Ironies abound. A stressed system goes awry; its communication processes break down; it fails to recognize the difference between self and other. Human babies with baboon hearts evoke national ethical perplexity – for animal-rights activists at least as much as for the guardians of human purity. In the United States gay men and intravenous drug users are the most “privileged” victims of an awful immune-system disease that marks (inscribes on the body) confusion of boundaries and moral pollution.<sup>19</sup>

But these excursions into communications sciences and biology have been at a rarefied level; there is a mundane, largely economic reality to support my claim that these sciences and technologies indicate fundamental transformations in the structure of the world for us. Communications technologies depend on electronics. Modern states, multinational corporations, military power, welfare-state apparatuses, satellite systems, political processes, fabrication of our imaginations, labor-control systems, medical constructions of our bodies, commercial pornography, the international division of labor, and religious evangelism depend intimately upon electronics. Microelectronics is the technical basis of simulacra, that is, of copies without originals.

Microelectronics mediates the translations of labor into robotics and word processing, sex into genetic engineering and reproductive technologies, and mind into artificial intelligence and decision procedures. The new biotechnologies concern more than human reproduction. Biology as a powerful engineering science for redesigning materials and processes has revolutionary implications for industry, perhaps most obvious today in areas of fermentation, agriculture, and energy. Com-

18. A left entry to the biotechnology debate: *Genewatch*, a Bulletin of the Committee for Responsible Genetics, 5 Doane St., 4th floor, Boston, MA 02109; Susan Wright, “Recombinant DNA Technology and Its Social Transformation, 1972–82,” *Osiris*, 2nd series, Vol. 2, 1986, pp. 303–360 and “Recombinant DNA: The Status of Hazards and Controls,” *Environment*, July/August 1982; Edward Yoxen, *The Gene Business* (New York: Harper & Row, 1983).

munications sciences and biology are constructions of natural-technical objects of knowledge in which the difference between machine and organism is thoroughly blurred; mind, body, and tool are on very intimate terms. The "multinational" material organization of the production and reproduction of daily life and the symbolic organization of the production and reproduction of culture and imagination seem equally implicated. The boundary-maintaining images of base and superstructure, public and private, or material and ideal never seemed more feeble.

I have used Rachel Grossman's image of women in the integrated circuit to name the situation of women in a world so intimately restructured through the social relations of science and technology.<sup>20</sup> I use the odd circumlocution, "the social relations of science and technology," to indicate that we are not dealing with a technological determinism, but with a historical system depending upon structured relations among people. But the phrase should also indicate that science and technology provide fresh sources of power, that we need fresh sources of analysis and political action.<sup>21</sup> Some of the rearrangements of race, sex, and class rooted in high-tech-facilitated social relations can make socialist feminism more relevant to effective progressive politics.

### The homework economy

The "New Industrial Revolution" is producing a new worldwide working class, as well as new sexualities and ethnicities. The extreme mobility of capital and the emerging international division of labor are intertwined

20. Starting references for "women in the integrated circuit": *Scientific-Technological Change and the Role of Women in Development*, ed. Pamela D'Onofrio-Flores and Sheila M. Pfafflin (Boulder, CO: Westview Press, 1982); Maria Patricia Fernandez-Kelly, *For We Are Sold, I and My People* (Albany, NY: SUNY Press, 1983); Annette Fuentes and Barbara Ehrenreich, *Women in the Global Factory* (Boston: South End Press, 1983), with an especially useful list of resources and organizations; Rachael Grossman, "Women's Place in the Integrated Circuit," *Radical America*, Vol. 14, No. 1, 1980, pp. 29-50; *Women and Men and the International Division of Labor*, ed. June Nash and M. P. Fernandez-Kelly (Albany, NY: SUNY Press, 1983); Aihwa Ong, "Japanese Factories, Malay Workers: Industrialization and the Cultural Construction of Gender in West Malaysia," *Power and Difference*, ed. Shelly Errington and Jane Atkinson (Palo Alto, CA: Stanford University Press, forthcoming); Aihwa Ong, *Spirits of Resistance and Capitalist Discipline: Factory Workers in Malaysia* (Albany, SUNY Press, 1987); *Science Policy Research Unity, Microelectronics and Women's Employment in Britain* (University of Sussex, 1982).

21. The best example is Bruno Latour, *Les Microbes: Guerre et Paix, suivi de Ir-réductions* (Paris: Métailié, 1984).

with the emergence of new collectivities and the weakening of familiar groupings. These developments are neither gender- nor race-neutral. White men in advanced industrial societies have become newly vulnerable to permanent job loss, and women are not disappearing from the job rolls at the same rates as men. It is not simply that women in third-world countries are the preferred labor force for the science-based multinationals in the export-processing sectors, particularly in electronics. The picture is more systematic and involves reproduction, sexuality, culture, consumption, and production. In the prototypical Silicon Valley, many women's lives have been structured around employment in electronics-dependent jobs, and their intimate realities include serial heterosexual monogamy, negotiating child care, distance from extended kin or most other forms of traditional community, a high likelihood of loneliness and extreme economic vulnerability as they age. The ethnic and racial diversity of women in Silicon Valley structures a microcosm of conflicting differences in culture, family, religion, education, and language.

Richard Gordon has called this new situation the homework economy.<sup>22</sup> Although he includes the phenomenon of literal homework emerging in connection with electronics assembly, Gordon intends "homework economy" to name a restructuring of work that broadly has the characteristics formerly ascribed to female jobs, jobs literally done only by

22. For the homework economy and some related arguments: Richard Gordon, "The Computerization of Daily Life, the Sexual Division of Labor, and the Homework Economy," paper delivered at the Silicon Valley Workshop Group conference, 1983; Richard Gordon and Linda Kimball, "High-Technology, Employment and the Challenges of Education," *SVRG Working Paper*, No. 1, July 1985; Judith Stacey, "Sexism by a Subtler Name? Postindustrial Conditions and Postfeminist Consciousness in the Silicon Valley," *Socialist Review*, no. 96, 1987, pp. 7-30; *Women's Work, Men's Work*, ed. Barbara F. Reskin and Heidi Hartmann (Washington, DC: National Academy of Sciences Press, 1986); *Signs*, Vol. 10, No. 2, 1984, special issue on women and poverty; Stephen Rose, *The American Profile Poster: Who Owns What, Who Makes How Much, Who Works Where, and Who Lives With Whom?* (New York: Pantheon, 1986); Patricia Hill Collins, "Third World Women in America," and Sara G. Burr, "Women and Work," ed. Barbara K. Haber, *The Women's Annual*, 1981 (Boston: G. K. Hall, 1982); Judith Gregory and Karen Nussbaum, "Race against Time: Automation of the Office," *Office: Technology and People*, Vol. 1, 1982, pp. 197-236; Frances Fox Piven and Richard Cloward, *The New Class War: Reagan's Attack on the Welfare State and Its Consequences* (New York: Pantheon, 1982); Microelectronics Group, *Microelectronics: Capitalist Technology and the Working Class* (London: CSE, 1980); Karin Stallard, Barbara Ehrenreich, and Holly Sklar, *Poverty in the American Dream* (Boston: South End Press, 1983) including a useful organization and resource list.

women. Work is being redefined as both literally female and feminized, whether performed by men or women. To be feminized means to be made extremely vulnerable; able to be disassembled, reassembled, exploited as a reserve labor force; seen less as workers than as servers; subjected to time arrangements on and off the paid job that make a mockery of a limited work day; leading an existence that always borders on being obscene, out of place, and reducible to sex. De-skilling is an old strategy newly applicable to formerly privileged workers. However, the homework economy does not refer only to large-scale de-skilling, nor does it deny that new areas of high skill are emerging, even for women and men previously excluded from skilled employment. Rather, the concept indicates that factory, home, and market are integrated on a new scale and that the places of women are crucial – and need to be analyzed for differences among women and for meanings for relations between men and women in various situations.

The homework economy as a world capitalist organizational structure is made possible by (not caused by) the new technologies. The success of the attack on relatively privileged, mostly white men's unionized jobs is tied to the power of the new communications technologies to integrate and control labor despite extensive dispersion and decentralization. The consequences of the new technologies are felt by women both in the loss of the family (male) wage (if they ever had access to this white privilege) and in the character of their own jobs, which are becoming capital-intensive, for example, office work and nursing.

The new economic and technological arrangements are also related to the collapsing welfare state and the ensuing intensification of demands on women to sustain daily life for themselves as well as for men, children, and old people. The feminization of poverty – generated by dismantling the welfare state, by the homework economy where stable jobs become the exception, and sustained by the expectation that women's wage will not be matched by a male income for the support of children – has become an urgent focus. The causes of various women-headed households are a function of race, class, or sexuality; but their increasing generality is a ground for coalitions of women on many issues. That women regularly sustain daily life partly as a function of their enforced status as mothers is hardly new; the kind of integration with the overall capitalist and progressively war-based economy is new. The particular pressure, for example, on U.S. black women, who have achieved an escape from (barely) paid domestic service and who now hold clerical and similar jobs in large numbers, has large implications for continued enforced black poverty with employment. Teenage women in industrializing areas of the third world increasingly find themselves the sole or major source of a cash wage for their families, while access to land is ever more problematic. These de-

velopments must have major consequences in the psychodynamics and politics of gender and race.

Within the narrative framework of three major stages of capitalism (commercial/early industrial, monopoly, multinational) – tied to nationalism, imperialism, and multinationalism, and related to Jameson's three dominant aesthetic periods of realism, modernism, and postmodernism – I would argue that specific forms of families dialectically relate to forms of capital and to its political and cultural concomitants. Although lived problematically and unequally, ideal forms of these families might be schematized as (1) the patriarchal nuclear family, structured by the dichotomy between public and private and accompanied by the white bourgeois ideology of separate spheres and nineteenth-century Anglo-American bourgeois feminism; (2) the modern family mediated (or enforced) by the welfare state and institutions like the family wage, with a flowering of afeminist heterosexual ideologies, including their radical versions represented in Greenwich Village around World War I; and (3) the "family" of the homework economy with its oxymoronic structure of women-headed households and its explosion of feminisms and the paradoxical intensification and erosion of gender itself.

This is the context in which the projections for worldwide structural unemployment stemming from the new technologies are part of the picture of the homework economy. As robotics and related technologies put men out of work in "developed" countries and exacerbate failure to generate male jobs in third-world "development" and as the automated office becomes the rule even in labor-surplus countries, the feminization of work intensifies. Black women in the United States have long known what it looks like to face the structural underemployment ("feminization") of black men, as well as their own highly vulnerable position in the wage economy. It is no longer a secret that sexuality, reproduction, family, and community life are interwoven with this economic structure in myriad ways which have also differentiated the situations of white and black women. Many more women and men will contend with similar situations, which will make cross-gender and race alliances on issues of basic life support (with or without jobs) necessary, not just nice.

The new technologies also have a profound effect on hunger and on food production for subsistence worldwide. Rae Lessor Blumberg estimates that women produce about 50 percent of the world's subsistence food.<sup>23</sup> Women are excluded generally from benefiting from the increased

23. Rae Lessor Blumberg, "A General Theory of Sex Stratification and Its Application to the Position of Women in Today's World Economy," paper delivered to Sociology Board, University of California, Santa Cruz, February 1983. high-tech commodification of food and energy crops, their days are made more arduous because their responsibilities to provide food do not diminish, and their reproductive situations are made more complex. Green Revolution technologies interact with other high-tech industrial production to alter gender divisions of labor and differential gender migration patterns.

The new technologies seem deeply involved in the forms of "privatization" that Ros Petchesky has analyzed, in which militarization, right-wing family ideologies and policies, and intensified definitions of corporate (and state) property as private synergistically interact.<sup>24</sup> The new communications technologies are fundamental to the eradication of "public life" for everyone. This facilitates the mushrooming of a permanent high-tech military establishment at the cultural and economic expense of most people, but especially of women. Technologies like video games and highly miniaturized television seem crucial to production of modern

University of California, Santa Cruz, 1984.

\* The conjunction of the Green Revolution's social relations with biotechnologies like plant genetic engineering makes the pressures on the land in the third world increasingly intense. The Agency for International Development's estimates (*New York Times* October 14, 1984) used at the 1984 World Food Day are that in Africa, women produce about 90 percent of rural food supplies, about 60 to 80 percent in Asia, and provide 40 percent of agricultural labor in the Near East and Latin America. Blumberg charges that world organizations' agricultural politics, as well as those of multinationals and national governments in the third world, generally ignore fundamental issues in the sexual division of labor. The present tragedy of famine in Africa might owe as much to male supremacy as to capitalism, colonialism, and rain patterns. More accurately, capitalism and racism are usually structurally male dominant.

forms of "private life." The culture of video games is heavily oriented to individual competition and extraterrestrial warfare. High-tech, gendered imaginations are produced here, imaginations that can contemplate destruction of the planet and a sci-fi escape from its consequences. More than our imaginations is militarized, and the other realities of electronic and nuclear warfare are inescapable. These are the technologies that promise ultimate mobility and perfect exchange – and incidentally enable tourism, that perfect practice of mobility and exchange, to emerge as one of the world's largest single industries.

The new technologies affect the social relations of both sexuality and reproduction, and not always in the same ways. The close ties of sexuality and instrumentality, of views of the body as a kind of private satisfaction- and utility-maximizing machine, are described nicely in sociobiological origin stories that stress a genetic calculus and explain the inevitable dialectic of domination of male and female gender roles.<sup>25</sup> These sociobiological stories depend on a high-tech view of the body as a biotic component or cybernetic communications system. Among the many transformations of reproductive situations is the medical one, where women's bodies have boundaries newly permeable to both "visualization" and "intervention." Of course, who controls the interpretation of bodily boundaries in medical hermeneutics is a major feminist issue. The speculum served as an icon of women's claiming their bodies in the 1970s; that handcrafted tool is inadequate to express our needed body politics in the negotiation of reality in the practices of cyborg reproduction. Self-help is not enough. The technologies of visualization recall the important cultural practice of hunting with the camera and the deeply predatory nature of a photographic consciousness.<sup>26</sup> Sex, sexuality, and

25. For a feminist version of this logic, see Sarah Blaffer Hrdy, *The Woman That Never Evolved* (Cambridge, MA: Harvard University Press, 1981). For an analysis of scientific women's story-telling practices, especially in relation to sociobiology, in evolutionary debates around child abuse and infanticide, see Donna Haraway, "The Contest for Primate Nature: Daughters of Man the Hunter in the Field, 1960-80," *The Future of American Democracy*, ed. Mark Kann (Philadelphia: Temple University Press, 1983), pp. 175-208. See also D. Haraway, *Primate Visions: Gender, Race, and Nature in the World of Modern Science* (New York: Routledge, 1989).

26. For the moment of transition of hunting with guns to hunting with cameras in the construction of popular meanings of nature for an American urban immigrant public, see Donna Haraway, "Teddy Bear Patriarchy," *Social Text*, No. 11, Winter 1984-1985, pp. 20-64; Roderick Nash, "The Exporting and Importing of Nature: Nature-Appreciation as a Commodity, 1850-1980," *Perspectives in American History*, Vol. 3, 1979, pp. 517-560; Susan Sontag, *On Photography* (New York: Dell, 1977); and Douglas Preston, "Shooting in Paradise," *Natural History*, Vol. 93, No. 12, December 1984, pp. 14-19.

reproduction are central actors in high-tech myth systems structuring our imaginations of personal and social possibility.

Another critical aspect of the social relations of the new technologies is the reformulation of expectations, culture, work, and reproduction for the large scientific and technical work force. A major social and political danger is the formation of a strongly bimodal social structure, with masses of women and men of all ethnic groups, but especially people of color, confined to a homework economy, illiteracy of several varieties, and general redundancy and impotence, controlled by high-tech repressive apparatuses ranging from entertainment to surveillance and disappearance. An adequate socialist-feminist politics should address women in the privileged occupational categories and particularly in the production of science and technology that constructs scientific-technical discourse, processes, and objects.<sup>27</sup>

This issue is only one aspect of inquiry into the possibility of a feminist science, but it is important. What kind of constitutive role in the production of knowledge, imagination, and practice can new groups doing science have? How can these groups be allied with progressive social and political movements? What kind of political accountability can be constructed to tie women together across the scientific-technical hierarchies separating us? Might there be ways of developing feminist science/technology politics in alliance with anti-military science facility conversion action groups? Many scientific and technical workers in Silicon Valley, the high-tech cowboys included, do not want to work on military science.<sup>28</sup> Can these personal preferences and cultural tendencies be welded into progressive politics among this professional middle class in which women, including women of color, are coming to be fairly numerous?

27. For crucial guidance for thinking about the political/cultural implications of the history of women doing science in the United States see *Women in Scientific and Engineering Professions*, ed. Violet Haas and Carolyn Perucci (Ann Arbor, MI: University of Michigan Press, 1984); Sally Hacker, "The Culture of Engineering: Women, Workplace, and Machine," *Women's Studies International Quarterly*, Vol. 4, No. 3, 1981, pp. 341-353; Evelyn Fox Keller, *A Feeling for the Organism* (San Francisco: Freeman, 1983); National Science Foundation, *Women and Minorities in Science and Engineering* (Washington, DC: NSF, 1988); Margaret Rossiter, *Women Scientists in America* (Baltimore, MD: Johns Hopkins University Press, 1982); Londa Schiebinger, "The History and Philosophy of Women in Science: A Review Essay," *Signs*, Vol. 12, No. 2, 1987, pp. 305-332.

## Women in the integrated circuit

Let me summarize the picture of women's historical locations in advanced industrial societies, as these positions have been restructured partly through the social relations of science and technology. If it was ever possible ideologically to characterize women's lives by the distinction of public and private domains – suggested by images of the division of working-class life into factory and home, of bourgeois life into market and home, and of gender existence into personal and political realms – it is now a totally misleading ideology, even to show how both terms of these dichotomies construct each other in practice and in theory. I prefer a network ideological image, suggesting the profusion of spaces and identities and the permeability of boundaries in the personal body and in the body politic. "Networking" is both a feminist practice and a multinational corporate strategy – weaving is for oppositional cyborgs.

So let me return to the earlier image of the informatics of domination and trace one vision of women's "place" in the integrated circuit, touching only a few idealized social locations seen primarily from the point of view of advanced capitalist societies: Home, Market, Paid Work Place, State, School, Clinic-Hospital, and Church. Each of these idealized spaces is logically and practically implied in every other locus, perhaps analogous to a holographic photograph. I want to suggest the impact of the social relations mediated and enforced by the new technologies in order to help formulate needed analysis and practical work. However, there is no "place" for women in these networks, only geometries of difference and contradiction crucial to women's cyborg identities. If we learn how to read these webs of power and social life, we might learn new couplings, new coalitions. There is no way to read the following list from a standpoint of "identification," of a unitary self. The issue is dispersion. The task is to survive in diaspora.

Home: Women-headed households, serial monogamy, flight of men, old women alone, technology of domestic work, paid home work, reemergence of home sweatshops, home-based businesses and telecommuting, electronic cottage, urban homelessness, migration, module architecture, reinforced (simulated) nuclear family, intense domestic violence.

Market: Women's continuing consumption work, newly targeted to buy the profusion of new production from the new technologies (especially as the competitive race among industrialized and industrializing nations to avoid dangerous mass unemployment necessitates finding ever bigger new markets for ever less clearly needed commodities); bimodal buying power, coupled with advertising targeting of the numerous affluent groups and neglect of the previous mass markets; growing importance

of informal markets in labor and commodities parallel to high-tech, affluent market structures; surveillance systems through electronic funds transfer; intensified market abstraction (commodification) of experience, resulting in ineffective utopian or equivalent cynical theories of community; extreme mobility (abstraction) of marketing/financing systems; interpenetration of sexual and labor markets; intensified sexualization of abstracted and alienated consumption.

**Paid Work Place:** Continued intense sexual and racial division of labor, but considerable growth of membership in privileged occupational categories for many white women and people of color; impact of new technologies on women's work in clerical, service, manufacturing (especially textiles), agriculture, electronics; international restructuring of the working classes; development of new time arrangements to facilitate the home-work economy (flex time, part time, overtime, no time); homework and out work; increased pressures for two-tiered wage structures; significant numbers of people in cash-dependent populations worldwide with no experience or no further hope of stable employment; most labor "marginal" or "feminized."

**State:** Continued erosion of the welfare state; decentralizations with increased surveillance and control; citizenship by telematics; imperialism and political power broadly in the form of information-rich/information-poor differentiation; increased high-tech militarization increasingly opposed by many social groups; reduction of civil service jobs as a result of the growing capital intensification of office work, with implications for occupational mobility for women of color; growing privatization of material and ideological life and culture; close integration of privatization and militarization, the high-tech forms of bourgeois capitalist personal and public life; invisibility of different social groups to each other, linked to psychological mechanisms of belief in abstract enemies.

**School:** Deepening coupling of high-tech capital needs and public education at all levels, differentiated by race, class, and gender; managerial classes involved in educational reform and refunding at the cost of remaining progressive educational democratic structures for children and teachers; education for mass ignorance and repression in technocratic and militarized culture; growing anti-science mystery cults in dissenting and radical political movements; continued relative scientific illiteracy among white women and people of color; growing industrial direction of education (especially higher education) by science-based multinationals (particularly in electronics- and biotechnology-dependent companies); highly educated, numerous elites in a progressively bimodal society.

**Clinic-Hospital:** Intensified machine-body relations; renegotiations of public metaphors which channel personal experience of the body, partic-

ularly in relation to reproduction, immune system functions, and "stress" phenomena; intensification of reproductive politics in response to world historical implications of women's unrealized, potential control of their relation to reproduction; emergence of new historically specific diseases; struggles over meanings and means of health in environments pervaded by high-technology products and processes; continuing feminization of health work; intensified struggle over state responsibility for health; continued ideological role of popular health movements as a major form of American politics.

**Church:** Electronic fundamentalist "super-saver" preachers solemnizing the union of electronic capital and automated fetish gods; intensified importance of churches in resisting the militarized state; central struggle over women's meanings and authority in religion; continued relevance of spirituality, intertwined with sex and health, in political struggle.

The only way to characterize the informatics of domination is as a massive intensification of insecurity and cultural impoverishment, with common failure of subsistence networks for the most vulnerable. Since much of this picture interweaves with the social relations of science and technology, the urgency of a socialist-feminist politics addressed to science and technology is plain. There is much now being done, and the grounds for political work are rich. For example, the efforts to develop forms of collective struggle for women in paid work, like District 925 of the SEIU (Service Employees International Union) should be a high priority for all of us. These efforts are profoundly tied to technical restructuring of labor processes and reformations of working classes. These efforts also are providing understanding of a more comprehensive kind of labor organization, involving community, sexuality, and family issues never privileged in the largely white male industrial unions.

The structural rearrangements related to the social relations of science and technology evoke strong ambivalence. But it is not necessary to be ultimately depressed by the implications of late twentieth-century women's relation to all aspects of work, culture, production of knowledge, sexuality, and reproduction. For excellent reasons, most Marxisms see domination best and have trouble understanding what can only look like false consciousness and people's complicity in their own domination in late capitalism. It is crucial to remember that what is lost, perhaps especially from women's points of view, is often virulent forms of oppression, nostalgically naturalized in the face of current violation. Ambivalence toward the disrupted unities mediated by high-tech culture requires not sorting consciousness into categories of "clear-sighted critique grounding a solid political epistemology" versus "manipulated false consciousness," but subtle understanding of emerging pleasures, experiences, and powers with serious potential for changing the rules of the game.

There are grounds for hope in the emerging bases for new kinds of unity across race, gender, and class, as these elementary units of socialist-feminist analysis themselves suffer protean transformations. Intensifications of hardship experienced worldwide in connection with the social relations of science and technology are severe. But what people are experiencing is not transparently clear, and we lack sufficiently subtle connections for collectively building effective theories of experience. Present efforts – Marxist, psychoanalytic, feminist, anthropological – to clarify even “our” experience are rudimentary.

I am conscious of the odd perspective provided by my historical position – a Ph.D. in biology for an Irish Catholic girl was made possible by Sputnik’s impact on U.S. national science-education policy. I have a body and mind as much constructed by the post-World War II arms race and cold war as by the women’s movements. There are more grounds for hope by focusing on the contradictory effects of politics designed to produce loyal American technocrats, which as well produced large numbers of disidents, rather than by focusing on the present defeats.

The permanent partiality of feminist points of view has consequences for our expectations of forms of political organization and participation. We do not need a totality in order to work well. The feminist dream of a common language, like all dreams for a perfectly true language, of a perfectly faithful naming of experience, is a totalizing and imperialist one. In that sense, dialectics too is a dream language, longing to resolve contradiction. Perhaps, ironically, we can learn from our fusions with animals and machines how not to be Man, the embodiment of Western logos. From the point of view of pleasure in these potent and taboo fusions, made inevitable by the social relations of science and technology, there might indeed be a feminist science.

### Acknowledgments

Research was funded by an Academic Senate Faculty Research Grant from the University of California, Santa Cruz. An earlier version of this chapter, on genetic engineering, appeared as “Lieber Kyborg als Göttin: Für eine sozialistisch-feministische Unterwanderung der Gentechnologie,” in Bernd-Peter Lange and Anna Marie Stuby, eds. (Berlin: Argument-Sonderband 105, 1984), pp. 66–84. The cyborg manifesto grew from “New Machines, New Bodies, New Communities: Political Dilemmas of a Cyborg Feminist,” *The Scholar and the Feminist X: The Question of Technology Conference*, April 1983.

The people associated with the History of Consciousness Board of University of California, Santa Cruz, have had an enormous influence on this

essay, so that it feels collectively authored more than most, although those I cite may not recognize their ideas. In particular, members of graduate and undergraduate feminist theory, science and politics, and theory and methods courses have contributed to the cyborg manifesto. Particular debts here are due Hilary Klein (“Marxism, Psychoanalysis, and Mother Nature”); Paul Edwards (“Border Wars: The Science and Politics of Artificial Intelligence”); Lisa Lowe (“Julia Kristeva’s *Des Chinoises*: Representing Cultural and Sexual Others”); Jim Clifford, “On Ethnographic Allegory,” in James Clifford and George E. Marcus, eds., *Writing Culture, the Poetics and Politics of Ethnography* (University of California Press, 1985), pp. 98–121.

Parts of the chapter were my contribution to a collectively developed session, *Poetic Tools and Political Bodies: Feminist Approaches to High Technology Culture*, 1984 California American Studies Association, with History of Consciousness graduate students Zoe Soufoulis, “Jupiter Space”; Katie King, “The Pleasures of Repetition and the Limits of Identification in Feminist Science Fiction: Reimaginings of the Body after the Cyborg”; and Chela Sandoval, “The Construction of Subjectivity and Oppositional Consciousness in Feminist Film and Video.” Sandoval’s theory of oppositional consciousness was published as “Women Respond to Racism: A Report on the National Women’s Studies Association Conference,” Center for Third World Organizing, Oakland, California, n.d. For Soufoulis’s semiotic-psychoanalytic readings of nuclear culture, see Z. Sofia, “Exterminating Fetuses: Abortion, Disarmament and the Sexo-Semiotics of Extraterrestrialism,” *Nuclear Criticism* issue, *Diacritics*, Vol 14, No. 2, 1984, pp. 47–59. King’s manuscripts (“Questioning Tradition: Canon Formation and the Veiling of Power”; “Gender and Genre: Reading the Science Fiction of Joanna Russ”; “Varley’s Titan and Wizard: Feminist Parodies of Nature, Culture, and Hardware”) deeply inform the *cyborg manifesto*.

Barbara Epstein, Jeff Escoffier, Rusten Hogness, and Jaye Miler gave extensive discussion and editorial help. Members of the Silicon Valley Research Project of the University of California, Santa Cruz and participants in conferences and workshops sponsored by SVRP (Silicon Valley Research Project) have been very important, especially Rick Gordon, Linda Kimball, Nancy Snyder, Langdon Winner, Judith Stacey, Linda Lim, Patricia Fernandez-Kelly, and Judith Gregory. Finally, I want to thank Nancy Hartsock for years of friendship and discussion on feminist theory and feminist science fiction. I also thank Elizabeth Bird for my favorite political button: Cyborgs for Earthly Survival.
